

Climate Change Services

from the
Rocky Mountain Institute and KEMA Inc.

Rocky Mountain Institute and KEMA Incorporated offer a full range of services to:

- Understand greenhouse gas regulatory and business risks and opportunities;
- Establish greenhouse gas emissions inventories and baselines;
- Develop emission reduction and mitigation options and costs;
- Recommend targets and strategies to benefit from early action;
- Design and implement plans to meet targets and/or program thresholds;
- Prepare organizations for California Climate Action Registry Certification.

Rocky Mountain Institute (RMI) has extensive knowledge of GHG policy and technical issues, highlighted by Dr. Joel Swisher's 20 years of work in carbon accounting methods and mitigation strategies. An industry pioneer, Dr. Swisher has helped develop carbon offset projects using renewable energy and energy efficiency technology, analyzed GHG trading programs for European governments, and written baseline studies and monitoring and verification plans for offset buyers such as the World Bank Prototype Carbon Fund. Now the managing director of RMI's Research & Consulting Group, he authored *The New Business Climate: A Guide to Lower Carbon Emissions and Better Business Performance*.

RMI's clients benefit from a 20-year track record of working with many of the biggest players in the energy, utility, automotive, real estate, manufacturing, chemical, semiconductor, and other industries. RMI's unique abilities include identifying the often unnoticed yet highly profitable synergies among functions within organizations, the hallmark of *Natural Capitalism*. Clients include Interface, STMicroelectronics, the World Bank, Dow Chemical, Monsanto, LucasFilm, the White House, the City of San Francisco.

KEMA is an international leader in providing emission reduction services including greenhouse gas inventories, developing strategic solutions to reduce emissions, identification of offsets, and evaluating emission control technologies. KEMA has helped dozens of European businesses and utilities develop emission reduction strategies to comply with Kyoto Protocols and the European Union Emissions Trading Scheme. KEMA has experienced engineers across the United States trained in the California Climate Action Registry General Reporting and Certification Protocols. KEMA offers 75 years of experience in all facets of energy services and consulting, including energy audits of over 7 billion square feet of building space; energy resource assessment; energy efficiency program design and implementation; monitoring and evaluation.

KEMA's clients are in all business segments, from small commercial customers to large industrial facilities to power generators. KEMA has 1500 professionals worldwide serving clients in 70 countries. Our California offices work closely with state agencies and utilities on all aspects of energy efficiency and renewable energy technology including grant programs and buy-down funding sources, providing clients with an unparalleled resource for current knowledge of California's energy programs and incentives.
